In these examples we use a 600 pixels high container, with the `flex-wrap` property set to `wrap` , to better demonstrate the `align-content` property.

Example

The `space-between` value displays the flex lines with equal space between them:

```
.flex-container {
  display: flex;
  height: 600px;
  flex-wrap: wrap;
  align-content: space-between;
}
```

Try it Yourself »

Example

The `space-around` value displays the flex lines with space before, between, and after them:

```
.flex-container {
  display: flex;
  height: 600px;
  flex-wrap: wrap;
  align-content: space-around;
}
```

Try it Yourself »

Example

The `stretch` value stretches the flex lines to take up the remaining space (this is default):

```
.flex-container {
  display: flex;
  height: 600px;
  flex-wrap: wrap;
  align-content: stretch;
}
```

Try it Yourself »

Example

The `center` value displays the flex lines in the middle of the container:

```
.flex-container {
  display: flex;
  height: 600px;
  flex-wrap: wrap;
  align-content: center;
}
```

Try it Yourself »

Example

The `flex-start` value displays the flex lines at the start of the container:

```
.flex-container {
  display: flex;
  height: 600px;
  flex-wrap: wrap;
}
```
